AL-P996

ACABAMENTO

Fabricado em liga metálica de alumínio(*), acabamento superficial anodizado incolor. Pino de rotação em aço inoxidável AISI304(**)

FIXAÇÃO

Fixação através de rosca interna na base da peça.

MATÉRIA-PRIMA

(*)O alumínio é um metal leve, macio e resistente. Possui um aspecto cinza prateado e fosco, devido à fina camada de óxidos que se forma rapidamente quando exposto ao ar. O alumínio não é tóxico como metal, não-magnético, e não cria faíscas quando exposto à atrito. O alumínio puro possui tensão de cerca de 19 (MPa) e 400 MPa se inserido dentro de uma liga. Sua densidade é aproximadamente de um terço do aço ou cobre. É muito maleável, muito dúctil, apto para a mecanização e fundição, além de ter uma excelente resistência à corrosão e durabilidade devido à camada protetora de óxido. É o segundo metal mais maleável, sendo o primeiro o ouro, e o sexto mais dúctil. Excelente condutor de calor.

(**)Aço Inoxidável AISI304

Norma S de equivalência: ABNT-SAE-AISI 304 / W Nr 1.0715 / DIN ~X5CrNi18
9 / JIS: ~SUS304 / BS: 2333

USO

Utilizada em cases para transporte de equipamentos, tampas, portas, basculantes de máquinas em geral.

Carga estática Máxima: 600 N (Newtons)

Torque de aperto máximo para parafusos de instalação: 1,7 N•m
